

Title	The Empirical Dimensionality of the Job Characteristic Inventory
Author	Ricky W. Griffin, Gregory Moorhead , Bruce H. Johnson and Lawrence B. Chonko
Source	Academy of Management Journal
Pub Date	1980
Keywords	
Abstract	<p>The article discusses a study designed to assess the cross-sample stability of the job characteristics inventory (JCI). According to the author, the JCI could have utility for task design research. Also discussed is the Job Diagnostic Survey (JDS) as applied to employees in organizations. The author notes that future research should be conducted to determine the psychometric properties of the JCI. The data from the study indicates that the dimensionality of tasks measured by the JCI could be less sample-specific than when measured by the JDS.</p>
